Case Study

Deltion College

How Deltion College saved time by using
SPDocKit to automate repetitive tasks

Customer Success

Deltion College is a regional education center active in nearly every discipline offered at senior secondary vocational education (MBO) level. The SharePoint Administrators at Deltion College are responsible for monitoring and keeping the SharePoint environments in shape 24/7.

At Deltion they have 4 SharePoint farms in total. The biggest farm consist of 8 servers and a database back-end. Monitoring such an environment is quite work-intensive.

Every week, a new functionality is added to the environment by external suppliers. Not all changes are implemented by scripts on all environments with all consequences. Investigating the cause usually takes a considerable amount of time.

College SharePoint administrators used to write their own scripts. Although writing scripts is fun, it takes some time and energy. A customer, however, would like to be helped immediately. That's why they started looking for another solution.

SPDocKit has helped Deltion College administrators with the:

* farm documentation,
* monitoring SharePoint farm health,
* comparing farms and tracking changes.

"SPDocKit generates reports that can be understood by everyone."

— Wilhelm Rojer, SharePoint Specialist, Deltion College

After installing and configuring a new SharePoint farm, Wilhelm and his team could forget a number of unnecessary steps. That **saved them a lot of working hours** and, most importantly, their clients got an immediate help.

SPDocKit offers a snapshot feature that helps administrators. All **changes made to the farm are clearly indicated**.

"The ability to make a snapshot of an existing environment and compare it with a previous version is really ideal."

– Wilhelm Rojer, SharePoint Specialist,
Deltion College

Besides the farm comparison, Event Viewer feature was another great help to the team.

It enabled SharePoint administrators to monitor information about their farms health from the Windows Event Log, SharePoint ULS and SQL logs across all servers in their farms.

"This is the ideal solution for monitoring multiple servers from one central point."

– Wilhelm Rojer, SharePoint Specialist,

Deltion College

SPDocKit
by SysKit

The Ultimate SharePoint Admin Tool

SPDocKit is every SharePoint administrator's must-have tool, offering a multifunctional administration experience- use it for **documenting, reporting and managing SharePoint farm.**

Benefits of using SPDocKit

Save time by automating routine administrators' tasks.

Increase data security and enforce governance policies.

Audit configuration and **enhance SharePoint farm performance.**

What does SPDocKit allow you to do?

› Create professional-looking SharePoint documentation in just a few clicks

› Explore, manage, and report on SharePoint permissions

› Validate farm configuration according to the latest SharePoint best practices

› Take snapshots to compare farms and track changes in farm configuration

› Establish your own particular SharePoint rules and run custom queries to enforce governance policies

*Trusted by more than **3000** customers worldwide!*
