Case Study

Summit 7 Systems

How Summit 7 Systems saved time by using SPDocKit to automate repetitive tasks

Customer Success

About the Company

Summit 7 Systems is a consulting company that provides SharePoint and Cloud services and solutions. The company was founded in 2008 in Minnesota. Today Summit 7 Systems is a growing team of highly specialized IT professionals, developers, and consultants.

Summit 7 Systems consultants undertake a range of different activities for SharePoint installations. The most common are the design and implementation of a new farm, and the migration of an existing farm.

Every design or migration requires the evaluation of the existing requirement. Evaluations were usually very time-consuming and required a lot of manual work. Even for a small company, documentation of a farm configuration would often take up to 40 hours of manual work.

After searching for solutions that could help with this problem, they stumbled upon SPDocKit and registered for a trial evaluation. Shortly after the trial, they bought their license.

SPDocKit has helped them with the:
- farm documentation,
- extraction and validation of custom solutions,
- tracking of changes made to the farm.

They used best practices to check if everything is set up correctly.

"SPDocKit gives such a nice overview of the permissions that it's worth buying just for it, and not to mention other features. I showed the tool to every client I worked with."

– Jay Simcox, Senior Consultant, Summit 7 Systems

The biggest plus Jay experienced was the amount of time he saved during the assessment. What usually lasted at least a week, was now done in under a day.

They saved time they would usually spend on scraping information from the useless data generated with the PowerShell scripts.

"The complete assessment with the installation and the configuration of the tool lasts a day, tops."

– Jay Simcox, Senior Consultant, Summit 7 Systems

Besides the permission reports, Best Practices are another set of reports that are often used. They are a good way to check if everything is set up correctly.

Sometimes the people running the systems just lack the experience. By using SPDocKit's Best Practices you can get a pretty good idea where you need to look for improvements.

"This helps people that don't have a lot of experience with PowerShell and troubleshooting. It's lot more efficient than relying on Google."

– Jay Simcox, Senior Consultant,
Summit 7 Systems

SPDocKit
by SysKit

The Ultimate SharePoint Admin Tool

SPDocKit is every SharePoint administrator's must-have tool, offering a multifunctional administration experience- use it for **documenting, reporting and managing SharePoint farm.**

Benefits of using SPDocKit

Save time by automating routine administrators' tasks.

Increase data security and enforce governance policies.

Audit configuration and **enhance SharePoint farm performance.**

What does SPDocKit allow you to do?

› Create professional-looking SharePoint documentation in just a few clicks

› Explore, manage, and report on SharePoint permissions

› Validate farm configuration according to the latest SharePoint best practices

› Take snapshots to compare farms and track changes in farm configuration

› Establish your own particular SharePoint rules and run custom queries to enforce governance policies
