SharePoint performance monitoring

Monitoring and analysis of SharePoint farms with SysKit Monitor

SysKit Monitor enables **agentless multi-tenant monitoring of your SharePoint servers** through an intuitive, easy-to-use interface. Monitoring multiple SharePoint farms and their SharePoint performance metrics is done using **one central console**. This improves data collection performance for geo-distributed monitoring, and there is no need to install any agents. Data is gathered from every domain stored on one dedicated server used by **SysKit Monitor**.
