

Keep Microsoft 365 compliant and secure with Syskit Point

Deep visibility, powerful management, and automated governance, all in a single scalable platform for Microsoft 365.

Are you having a hard time managing complex Microsoft 365 environments?

You might be struggling with:

Fragmented administration

External sharing risks

Uncontrolled sprawl

Unauthorized access

Auditing confusion

Process inefficiency

Your challenges end with **Syskit Point**,
a single scalable platform that makes Microsoft 365
management and governance easy.

VISIBILITY

Save hours of manual work and gain visibility with a centralized inventory — users, structure, sharing, and resources across Microsoft Teams, Groups, OneDrive, SharePoint sites, and Power Platform.

Focus on providing a safer collaboration experience.

SECURITY

Understand and manage who has access to what. Stay on top of unauthorized or malicious activity by auditing user and admin actions.

Promptly react to permission and configuration changes. Stay compliant with regulations and protect your data.

GOVERNANCE

Automate governance procedures, avoid uncontrolled sprawl, and manage workspaces throughout the lifecycle. Unburden IT teams and make end users your reliable governance partners.

Accelerate the adoption of modern cloud collaboration.

Who can benefit from Syskit Point?

Microsoft 365 Admins

Gain visibility, manage access, audit user actions, create reports, and automate governance from a single platform.

Compliance & Security Managers

Stay aware of all user activities. Automate policies and procedures to meet industry, security, and regulatory standards.

Business Users

Reduce administrative burden and make end users reliable partners in keeping your environment uncluttered and secured.

**Eliminate complexity. Increase efficiency. Get clarity.
Gain value immediately.**

Automate governance and increase efficiency

Manage access and boost security

Centralize inventory and gain visibility

**Effortless M365 management,
scalable to your enterprise needs.**

TAILORED TO YOU

Deploy it as a cloud-based SaaS or a self-hosted platform.

COMPLETELY SCALABLE

Start with a subscription plan that best fits your needs. Easily upgrade when you need to.

ONE-STEP SOLUTION

Leave installing and managing multiple products behind.

**Made by IT professionals, for IT professionals
– we're here for you every step of the way.**

Rely on us for fast updates, a defined roadmap, exceptional support, and detailed self-service documentation.

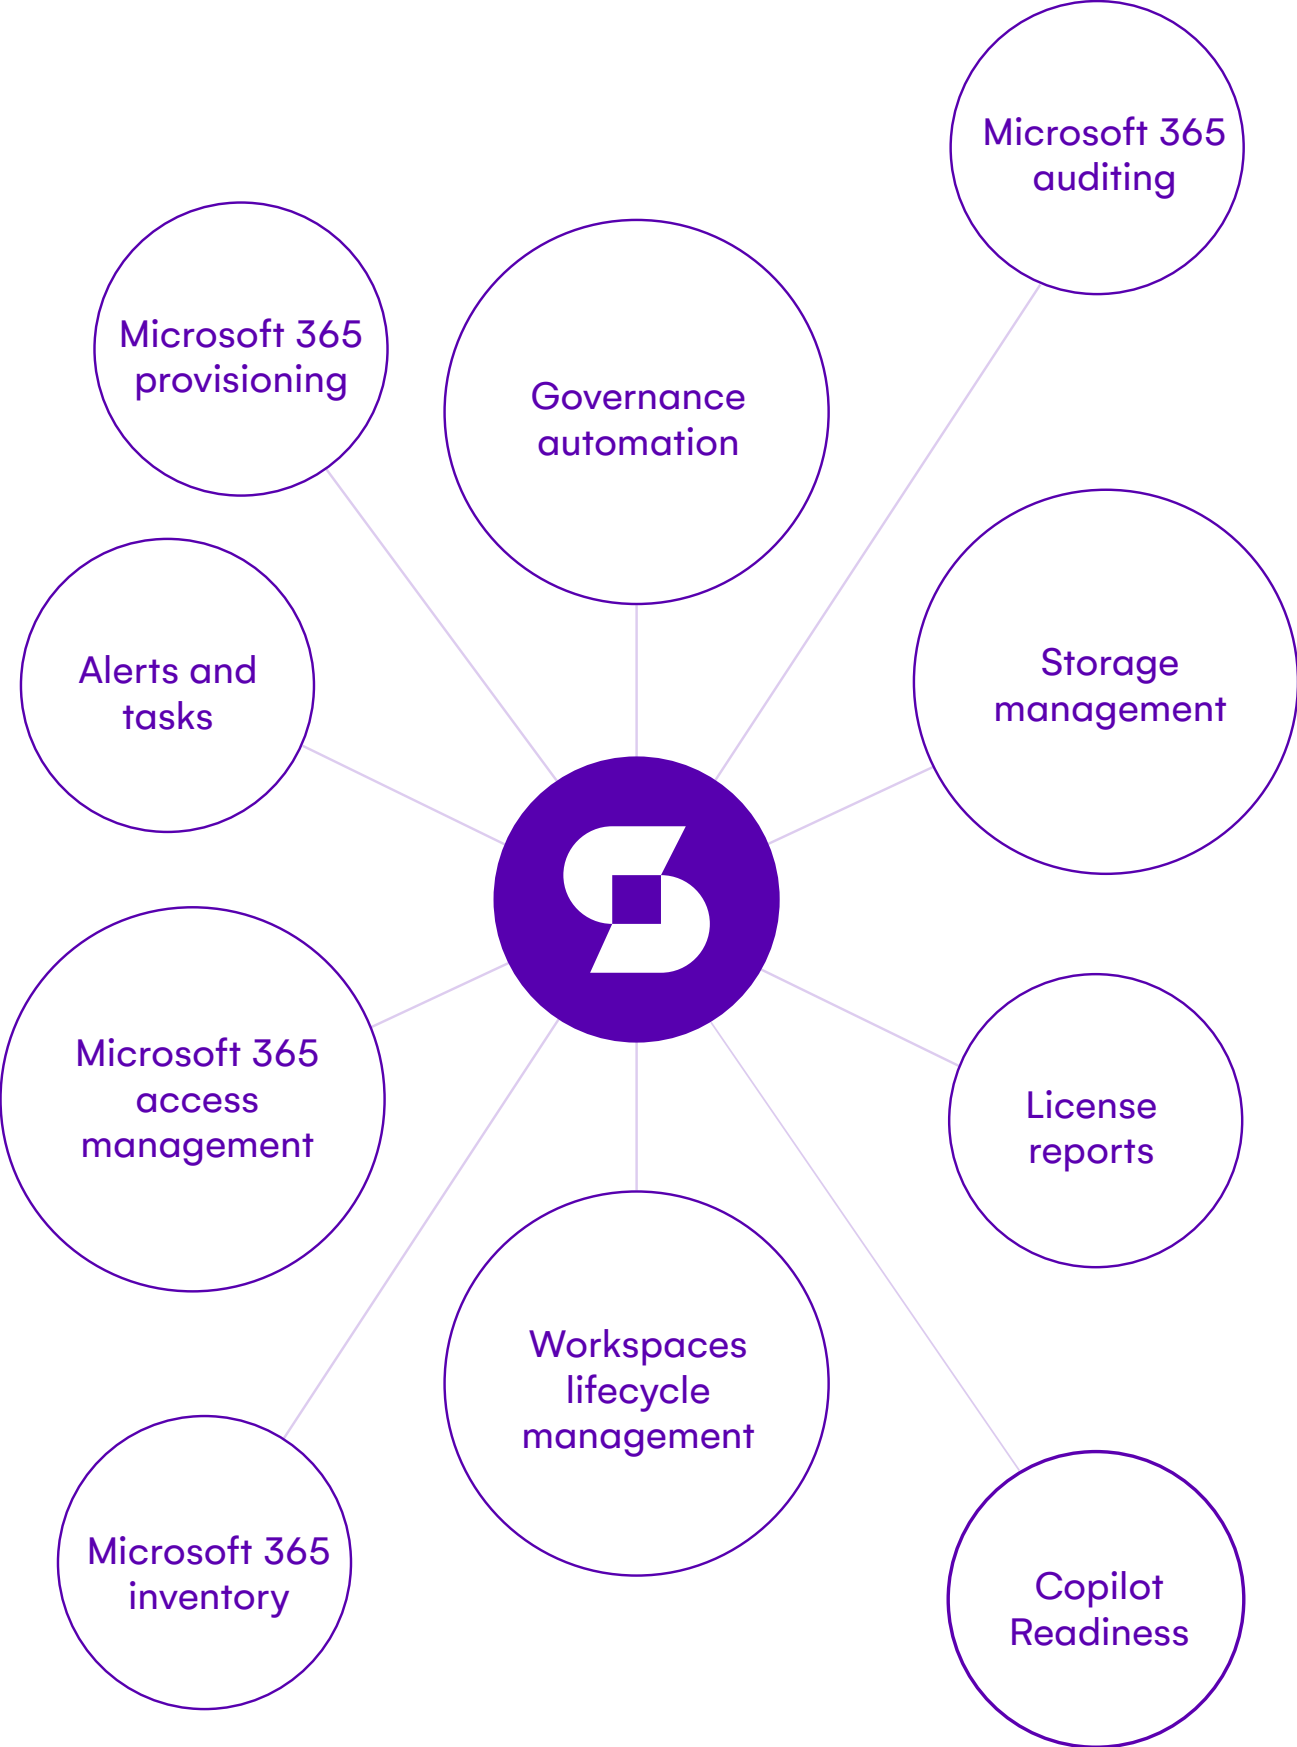

» I'm really impressed with how Syskit Point keeps getting better with new features. It shows they're not just stopping at good enough, but always striving to give you more value.

SCOTT DYER

Senior Director of Information Technology, Ovative

Explore Syskit Point

Feature overview

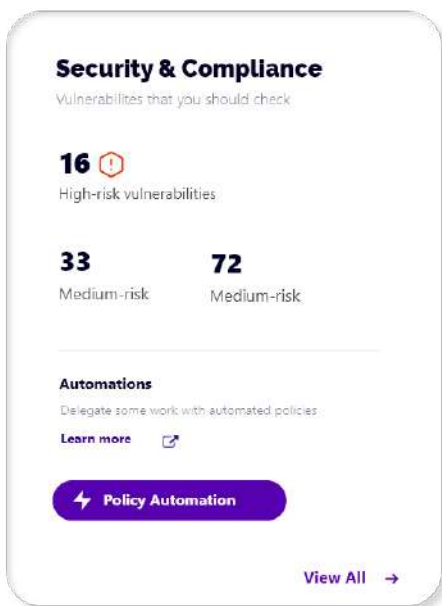

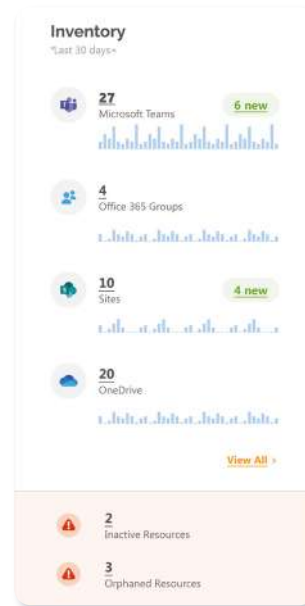

USERS & WORKSPACES INVENTORY

Gain a centralized overview of all users and resources across SharePoint sites, Microsoft Teams, Groups, OneDrive, Power App, Power Automate, and Power BI.

Drill down into detailed reports on structure, memberships, permissions, sharing, and much more.

Gain efficiency and secure your data.

SECURITY AND COMPLIANCE DASHBOARD

The Dashboard pinpoints the most critical vulnerabilities and misalignments with Microsoft 365 best practices.

- **Dashboard** — get actionable insights you need to keep your environment secure and inventory under control in real time. Drill down for more details and take action.
- **Actions** — resolve things manually (such as removing a user or license), nudge owners to resolve a specific issue related to their workspace (add or remove owners, for example), or turn off detection for a defined period.
- **Automation** — send tasks to owners and admins to resolve potential misalignments automatically.

Ensure continuous cleanup and set a new maintenance standard to stay compliant.

It took us 5 days from the presentation of Point to being fully operational. It's been giving us great governance and security benefits from day one!

ROBERT PRESKAR
Head of IT projects, The Rimac Group

VISIBILITY: INVENTORY & REPORTING

Explore powerful reporting capabilities and perform management actions in real time, from the same point. Easily export or schedule reports to be delivered to any inbox or SharePoint library you want.

PERMISSIONS

Detect and manage who has access to what across Microsoft Teams (private and shared channels included), Groups, SharePoint sites, One Drive accounts, and across Power Platform.

Drill down into user permissions and memberships. Detect broken inheritance for all your content where permissions differ from a parent.

1 Selected

Manage:

- Stop Sharing

EXTERNAL SHARING

Control external access and excessive content sharing. Find all external users, guests, externally shared content and links.

Prevent potential data leaks.

LICENSE USAGE

Discover assigned, unassigned, and inactive Microsoft 365 licenses and the overall cost. Find and reclaim licenses assigned to inactive or blocked users.

Optimize your budget.

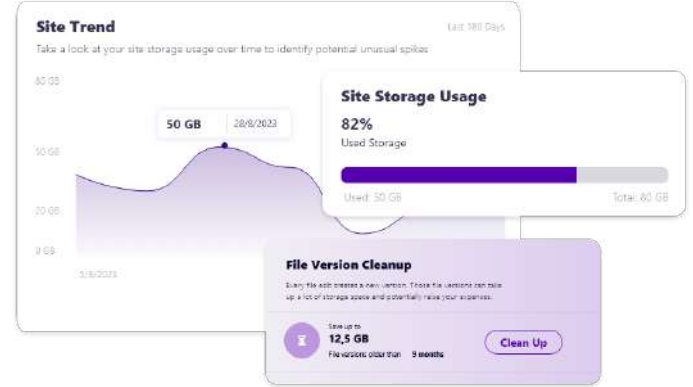

License	Purchased Licenses	Assigned Licenses	Unassigned Licenses
Azure Active Directory Premium	2	1	1
Microsoft Flow	10000	3	9997
Microsoft Office 365 Plan E1	3	2	1
Power BI	1000000	2	999998
Teams commercial	2	1	1

STORAGE INSIGHTS AND OPTIMIZATIONS

Gain complete visibility over trends and resources that take up storage so you don't get caught off guard.

Monitor Tenant storage usage trends over time and then dig deeper into the Site and File details. Explore **files' versions, sizes, and extensions** and **use our calculator** to discover potential storage cleanup and savings areas. Stay proactive – **receive a notification once you get close to the tenant storage quota limit** you've set up. Free up storage space with just a few clicks by removing old and redundant file versions.

Get the tools to optimize SharePoint storage, identify cost-saving opportunities, and make timely informed decisions.

CLEANUP

Identify all orphaned Microsoft 365 Groups and Microsoft Teams and sites with disabled or deleted owners and assign new ones. Identify and remove orphaned users.

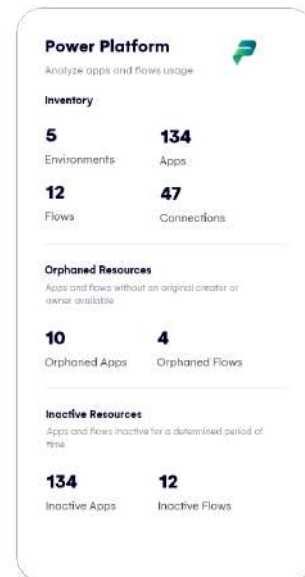

Stop sprawl and increase efficiency.

POWER PLATFORM

The first problem IT teams and admins face is understanding their current Power Platform usage. With Syskit Point, you can find all Power BI dashboards, Power Apps, and Power Automate flows across existing environments and all connections.

Security and compliance are top priorities, so we will show you every role and permission for each app and flow in your tenant. Detect which apps and flows are inactive and not being used or which are orphaned without active owners to avoid sprawl, outdated solutions, and data security.

Avoid inefficient administration, uncontrolled costs, disrupted operations, and security and compliance risks.

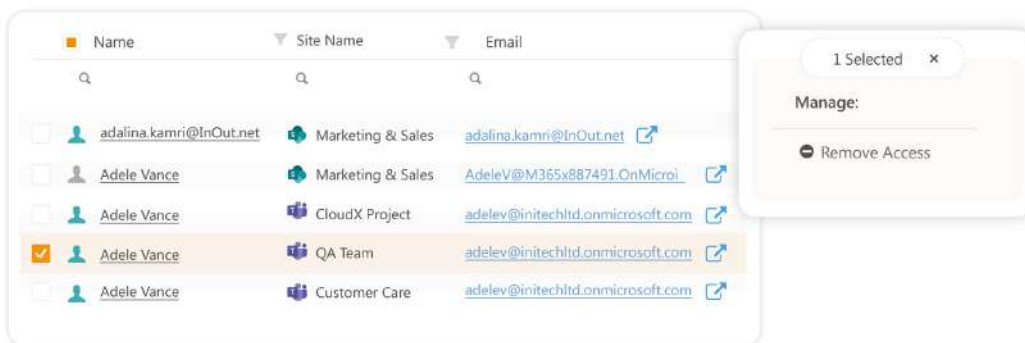

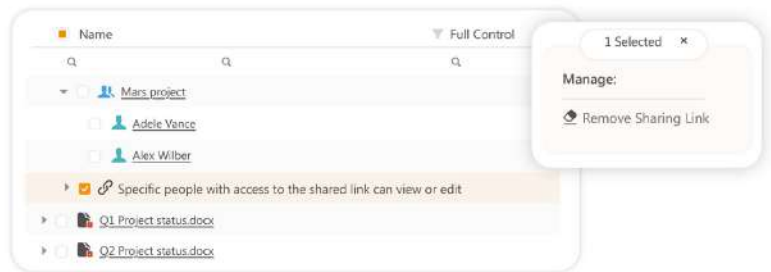

SECURITY: ACCESS MANAGEMENT

Perform single and bulk management actions directly from reports.

- ▶ Manage user access and permissions from one central point. Easily offboard people who leave or switch departments.
- ▶ Add, copy, or transfer permissions for multiple users at once.
- ▶ Remove multiple or suspicious sharing links and manage external users and guests.
- ▶ Manage Microsoft Teams and Groups membership and ownership.
- ▶ Restore permissions inheritance on items where you find unique permissions.
- ▶ Find and remove disabled users.

Take charge of user access. Maximize the security of your tenant.

Microsoft 365 Alerting

- ▶ Stay alert and prevent security issues proactively by receiving alerts with critical details directly in your inbox.
- ▶ Avoid complexity and overflowed ticketing systems by empowering content owners to easily set up alerts for their content.
- ▶ Customize your alerts and explore their details how you see fit — directly from your inbox or through a detailed audit log in Syskit Point.

SECURITY: AUDITING & COMPLIANCE

For departments looking to stay compliant with regulations in their Microsoft 365 environment, Point's auditing feature helps boost security and prevent malicious actions.

Monitor how your sensitive data is being used and accessed. Avoid security breaches — audit user and admin activity across Microsoft 365:

- Sharing files, folders, sites, teams, or groups
- Breaking/restoring sharing inheritance
- Sharing links within the company & anonymous links
- Deleting or creating sites, teams, or groups
- Changing admins or modifying organization-wide settings and many more

Get real-time updates, react quickly, and prevent security issues.

▶ Boost security, stay compliant with various policies, and detect malicious behavior across SharePoint, Microsoft Teams and Groups, Exchange Online and OneDrive.

▶ Get an overview of all administrative actions from multiple admin centers, workspace changes, and user activities.

▶ Provide more visibility to external auditors and the support team.

The screenshot shows a user selection dropdown menu with three options: Adele Vance, Alex Wilber, and Allan Deyoung, each with a checkmark. Below the dropdown is a table with columns: Date, Activity, User, and Item.

» A colleague recently shared an external link through their OneDrive that could have led to a major incident. Thanks to Point, it was resolved in a matter of minutes!

MARIN TICA
IT Director, Zagreb Airport

The AI race is on, and over a million companies are already competing to gain an edge. However, Copilot could inadvertently expose confidential information, surface outdated content, and amplify security risks. Take proactive steps to protect one of your most valuable assets—your data.

Microsoft 365 Copilot risks

DATA LEAKS

Without strict access controls and reviews, Copilot can expose confidential data to unauthorized users, increasing the risk of sensitive data leakage. Managing permissions manually is time-consuming and prone to errors.

INCORRECT OUTPUT

Copilot can pull outdated or irrelevant information, leading to confusion, questionable productivity, and decreased adoption. Instead of saving time, your employees are losing trust in products and wasting valuable resources.

Syskit Point: The key to a safe Copilot deployment

Syskit Point enables proper access management and governance across Microsoft 365, preventing data leaks and allowing decision-makers to have peace of mind.

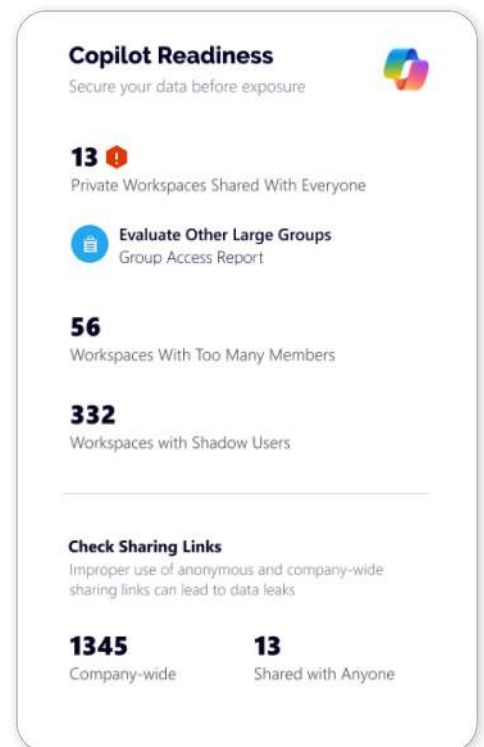

GET EXPECTED RESULTS FROM COPILOT

Keep your tenant up to date, and support end users in proactive care of their workspaces through **collaborative governance**. This will help **reduce the impact of outdated content** on your output and make certain your employees are working with the most current and relevant data.

PREVENT UNAUTHORIZED DATA EXPOSURE

Assure that only the right people have access to sensitive information with **advanced permission management and reporting**. Syskit Point gives IT teams the capabilities to regulate access and enforce governance easily across the entire Microsoft 365 ecosystem.

You can ensure that **Copilot works for you** – not against you – by providing a secure, governed, and compliant environment for AI-driven innovation.

GOVERNANCE: GOVERNANCE AUTOMATION & LIFECYCLE MANAGEMENT

Your organization's Microsoft 365 success starts with proper governance. When established properly, it will enable users to get maximum value from the platform. Manage workspaces throughout the lifecycle with automated actions and policies.

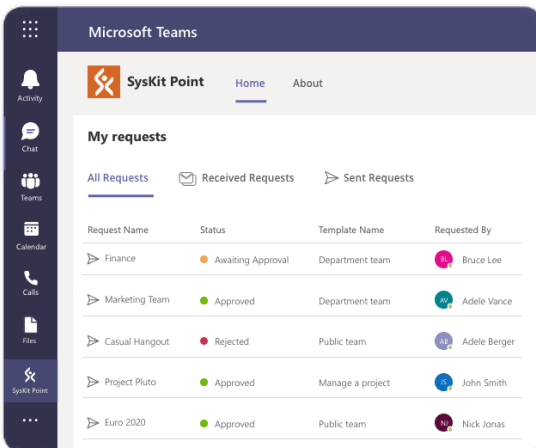

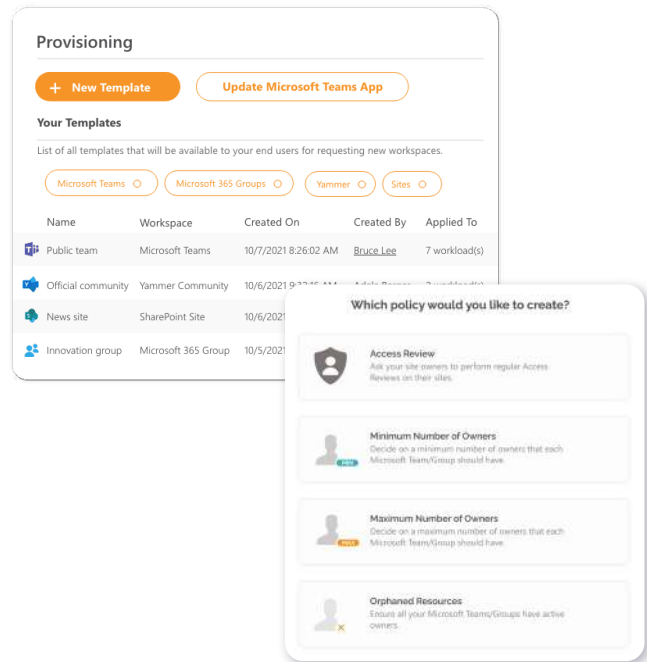

Reduce the number of IT support tickets.
Avoid sprawl and gain control over your environment.

Creation: provisioning

CUSTOMIZE AND CONTROL WORKSPACE CREATION AND ENFORCE POLICIES

Predefine templates for new workspaces — Teams, Groups, sites, and Yammer — with custom metadata, naming and governance policies in place.

You can also integrate Syskit Point with your existing provisioning process with the Syskit Point API and Webhooks. When an event occurs, Point will notify the subscribed applications.

UNBURDEN IT TEAMS AND PROVIDE A FRIENDLY EXPERIENCE FOR END USERS

Introduce a managed self-service approach for your end users with our user-friendly Microsoft Teams app.

LIFETIME & CLEANUP: Collaborative governance with end users

Keep your tenant secure and clutter-free. Make end users your reliable governance partners.

RULES FOR POLICY AUTOMATION

Combine rules and conditions and automatically apply policies to all workspaces, regardless of how, when, and where they were created. Control oversharing with policies that detect and resolve possible vulnerabilities across your tenant.

ACCESS REVIEWS

Make site owners with operational knowledge (e.g., team managers, project leaders) your reliable governance partners.

Schedule automated access reviews on a periodical basis.

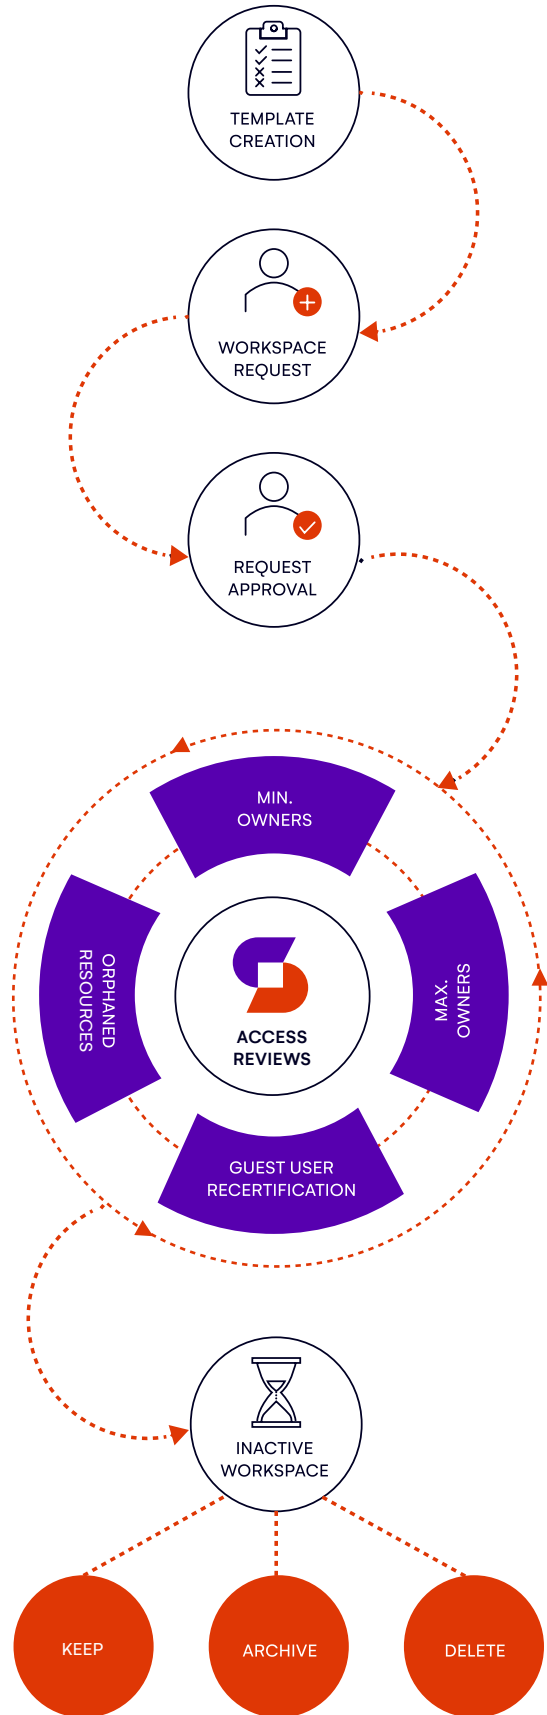

ACCESS REQUESTS

Provide end users the self-service ability to search all existing Microsoft 365 Groups, Microsoft Teams, SharePoint sites, distribution lists, and security groups and request access to them using our simple Teams Point app.

REGULAR CLEANUPS

Automatically detect inactive SharePoint sites, Groups, and Teams. Define policies for when and how to keep, delete, or archive the data.

Set up notifications for end users and enable them to decide what to do with inactive resources.

Your Microsoft 365 management has reached a turning point.

- Get detailed self-service documentation covering every segment of the product to help you onboard faster.
- Experience powerful Microsoft 365 reporting and management using your actual data.
- Complete a quick and straightforward setup in a few minutes. No credit card required.

Start your 21-day free trial of Syskit Point.
