

Keep Microsoft 365 compliant and secure

Get full M365 visibility, automate governance, and protect collaboration — in one intuitive platform.

Reduce risk, prevent sprawl, and prepare for AI.

COMMON MICROSOFT 365 CHALLENGES AND RISKS

- ▶ Lack of visibility and fragmented administration
- ▶ Sharing risks and unauthorized access
- ▶ Sensitive data governance and data leaks
- ▶ Auditing complexity and meeting regulations
- ▶ Uncontrolled sprawl
- ▶ AI-readiness
- ▶ Process inefficiency
- ▶ Storage consumption

Syskit Point is a scalable platform that provides unmatched visibility and increases your tenant's compliance and security posture while eliminating complexity. Gain complete control while supporting the adoption of AI-driven productivity across Microsoft 365.

BUSINESS OPTIMIZATION AND AI-READINESS

Eliminate administration complexity and gain complete **visibility across Microsoft Teams, Groups, OneDrive, SharePoint sites, Power Platform, and AI agents** to ensure seamless business continuity and enhanced productivity. Leverage actionable insights to **boost efficiency, optimize costs, get AI-ready, and protect your data.**

SECURITY, COMPLIANCE, AND RISK MITIGATION

Control oversharing, understand and manage access, and stay on top of unauthorized or malicious activity by auditing user and admin actions. Detect risks early to prevent costly breaches and **future-proof your environment against evolving compliance demands and security challenges.**

LESS IT TICKETS, NO SPRAWL, AND CONTROLLED GOVERNANCE

A complete solution for policy enforcement, automation, and smart delegation to workspace owners. Control every step of the workspace lifecycle with ease. **Streamline sprawl, prevent oversharing, secure the data, and ensure AI readiness through protected, discoverable, and clutter-free data.**

WHO CAN BENEFIT FROM SYSKIT POINT?

Microsoft 365 Admins

Simplify Microsoft 365 governance while assuring that employees have a good user experience.

Compliance & Security Managers

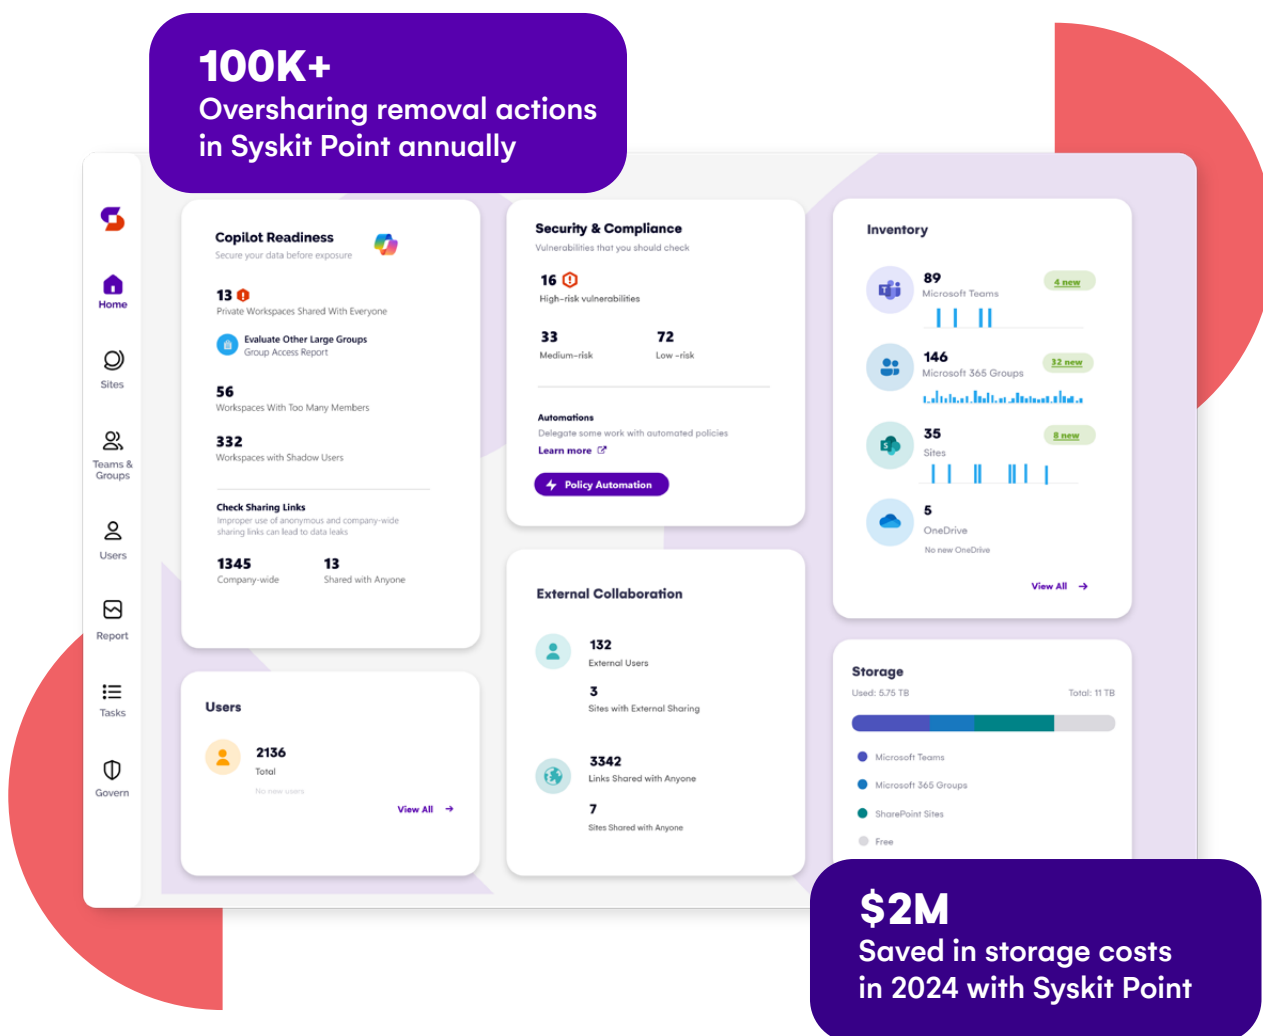

Stay aware of every activity. Automate policies and procedures to meet industry and regulatory standards.

Business Users

Make owners reliable partners by enabling guided governance tailored to fit the knowledge of every user. Keep it all clutter-free and secure.

Govern Microsoft 365 with confidence — ensuring sensitive data is secure, access is controlled, and compliance risks are reduced. Gain oversight and control, while scaling operations more efficiently.

With deep visibility, automated governance, and end-to-end lifecycle management, Syskit Point supports strategic goals such as cost reduction, regulatory readiness, and safe adoption of AI-driven productivity and collaboration.

“It took us 5 days from the presentation of Point to being fully operational. It’s been giving us great governance and security benefits from day one!”

– Robert Preskar, Head of IT projects, Rimac Group

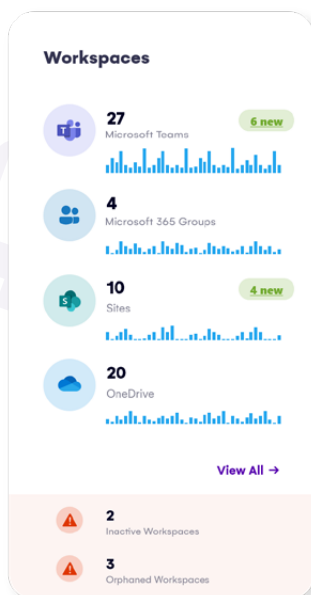

VISIBILITY ACROSS MICROSOFT 365 – CENTRALIZED INVENTORY

Time-saving centralization

Simplify Microsoft 365 administration with a unified overview of everything from users to sites. No more scripts and no more switching between Microsoft 365 admin centers.

Stop oversharing, overspending, and sprawl

Know who has access before it becomes a problem. Stop overspending on licenses and storage. Avoid clutter and sprawl from unused, duplicated, and orphaned resources.

ACTIONABLE INVENTORY OVERVIEWS

Explore across centralized inventory: **Microsoft Teams, Groups, OneDrive, SharePoint sites, Power Platform, SharePoint agents, and Copilot agents.**

Dig into numerous pre-built reports to control sharing, permissions, find internal and external users, understand usage, and monitor tenant security and compliance.

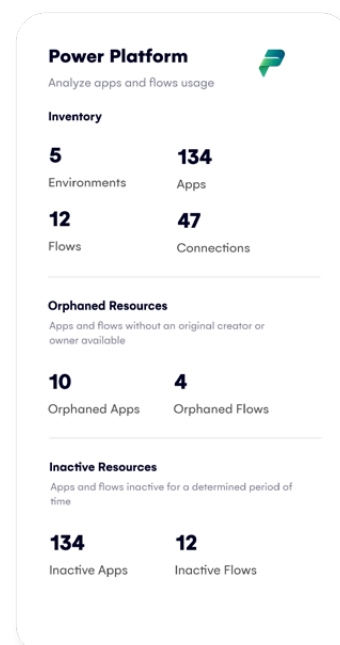

Export and schedule reports to receive them in your and your colleague's inbox.

FULL POWER PLATFORM VISIBILITY

Avoid operation disruptions, using outdated solutions, extra costs, and security and compliance risks.

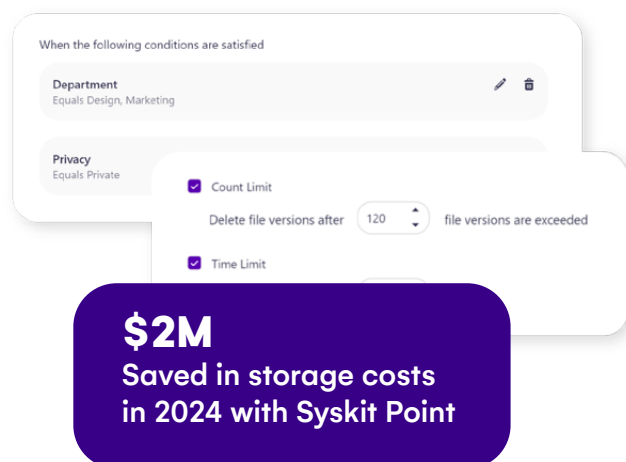

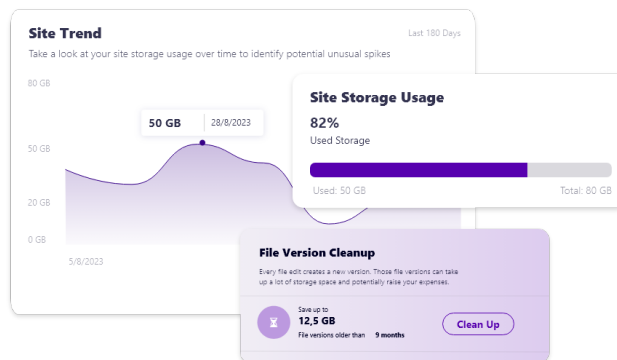

- **Inventory** – Discover all Power Automate flows, Apps, Copilot agents and PowerBI along with connections, ownership, and usage information.
- **Cleanup Views and Actions** – Identify inactive or orphaned flows and apps before they cause disruptions. Evaluate their relevance and take action.
- **Permissions** – Check every role, external user and permission for each App, Flow, and Power BI.

STORAGE INSIGHTS

Gain detailed visibility over trends and resources that take up storage and dig deep into site details.

Pinpoint workspaces and content with the most storage-saving potential and drill into more details by size, file type, or versions.

CONTROL STORAGE COSTS

Start with detailed reporting and make informed decisions to control consumption and costs.

Optimize SharePoint storage with automated cleanup of old and redundant file versions.

Get alerts when reaching a storage limit and utilize the tools for automatic cleanup and making cost-saving decisions.

LICENSE USAGE

Easily review complete license inventory, segregate by department or locations, and keep track of overall licensing cost. **Reclaim licenses** assigned to inactive or blocked users and **optimize budget consumption**.

WORKSPACE CLEANUP

Identify **all orphaned** Microsoft Teams, Groups, and sites with deleted or disabled owners and assign new ones. **Detect inactive** workspaces and let owners decide to keep, delete, or archive.

- Keep storage usage under control without relying on manual cleanup or scripts.
- Ensure your environment stays lean, relevant, and easy to navigate over time.
- Make smarter renewal and upgrade decisions with accurate usage data at your fingertips.

« Syskit Point allowed us to manage a 5% buffer of licenses effectively, so we always have the ability to scale up or down in terms of users without unnecessary costs. »

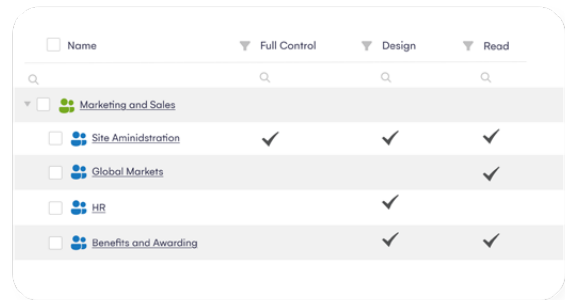

– Eddie Soto, Messaging Engineer at Lionsgate

LIONSGATE®

REAL-TIME PERMISSIONS REPORTS

Easily detect who has access to what across Microsoft 365, in real time, down to the file level.

Ensure the right people —internal users, guests, and contractors — have appropriate access levels.

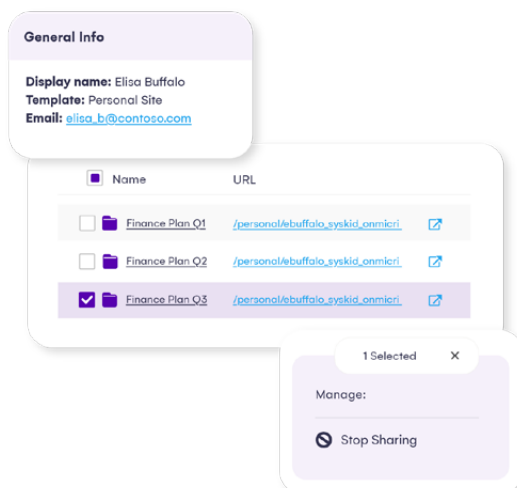

<input type="checkbox"/> Name	<input type="checkbox"/> Full Control	<input type="checkbox"/> Design	<input type="checkbox"/> Read
<input type="checkbox"/> Marketing and Sales			
<input type="checkbox"/> Site Administration	✓	✓	✓
<input type="checkbox"/> Global Markets			✓
<input type="checkbox"/> HR		✓	
<input type="checkbox"/> Benefits and Awarding		✓	✓

PERMISSION MATRIX

Detect and manage access across Microsoft Teams (private and shared channels included), Groups, SharePoint sites, and OneDrive.

USER AND UNIQUE PERMISSIONS

Drill down into user permissions and use actions directly from reports. Detect unique permissions and easily restore permission inheritance.

CONTROL EXTERNAL ACCESS AND EXCESSIVE CONTENT SHARING

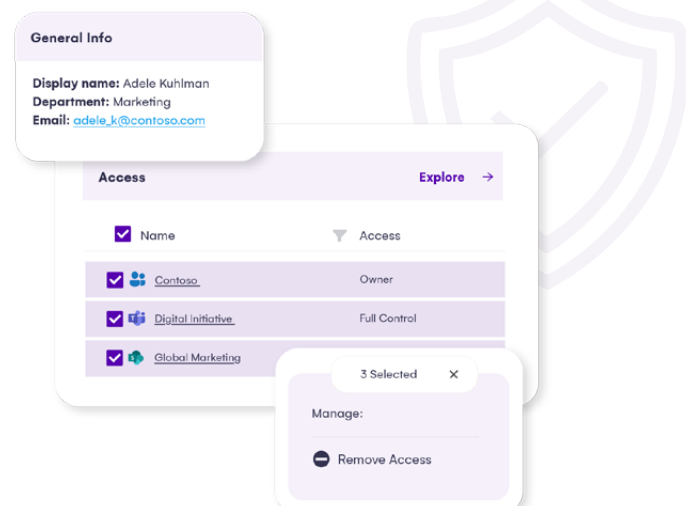

Prevent data breaches by gaining complete clarity over external sharing.

- Detect all external and guest users.
- Find externally shared content across inventory.
- Track sharing links — check all anonymous links, links for specific people, and sharing links within your company.

ACCESS & SHARING MANAGEMENT

Maximize security and stay ahead of security issues with real-time updates.

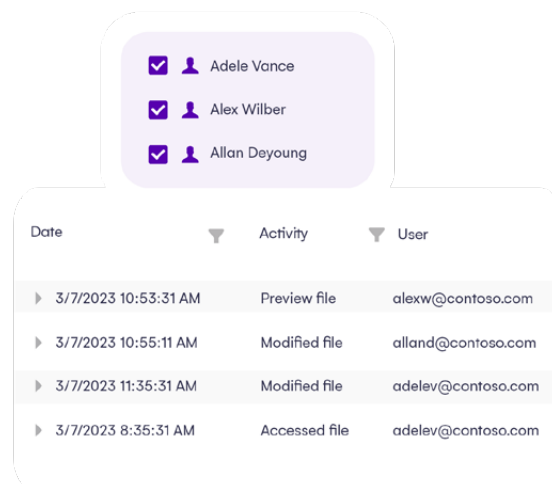

- Manage users in bulk — copy, add, or transfer permissions for multiple users simultaneously.
- Remove multiple or suspicious sharing links and manage external access.
- Manage Microsoft Teams and Groups membership and ownership.
- Restore permission inheritance.

PREVENTION WITH AUDITING

Detection, prevention, compliance — get notified and audit all actions from multiple admin centers, monitor workspace changes, admin and user activities.

- A comprehensive audit trail helps you **meet regulations** such as ISO, HIPAA, and GDPR with ease.
- Support legal discovery, risk reviews, and data classification assessments.
- **Prepare for external auditors** with clean, exportable records — no scripting needed.

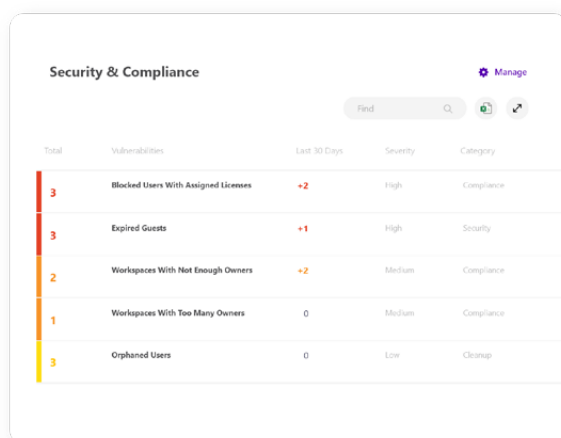

The screenshot shows a notification card at the top with three users: Adele Vance, Alex Wilber, and Allan Deyoung, each with a checkmark icon. Below it is a table with columns for Date, Activity, and User.

Date	Activity	User
3/7/2023 10:53:31 AM	Preview file	alexw@contoso.com
3/7/2023 10:55:11 AM	Modified file	alland@contoso.com
3/7/2023 11:35:31 AM	Modified file	adelev@contoso.com
3/7/2023 8:35:31 AM	Accessed file	adelev@contoso.com

Prevent security issues, customize your alerts and **proactively receive critical information** in your inbox.

- ▶ Sharing
- ▶ Deleting
- ▶ Creating sharing links
- ▶ Bulk downloads
- ▶ Breaking/restoring inheritance
- ▶ Changing privacy
- ▶ Changing settings
- ▶ Admin updates
- ▶ Detect mailbox activities

The screenshot shows the 'Security & Compliance' dashboard. It has a search bar and a 'Manage' button. Below is a table with columns: Total, Vulnerabilities, Last 30 Days, Severity, and Category.

Total	Vulnerabilities	Last 30 Days	Severity	Category
3	Blocked Users With Assigned Licenses	+2	High	Compliance
3	Expired Guests	+1	High	Security
2	Workspaces With Not Enough Owners	+2	Medium	Compliance
1	Workspaces With Too Many Owners	0	Medium	Compliance
3	Orphaned Users	0	Low	Cleanup

PROACTIVE MONITORING, ACTIONS, AND RECOMMENDATIONS

Stay aware of Microsoft 365 vulnerabilities or policy violations. React proactively with data-informed guidance, automations, and alerts in place.

- **Take manual actions easily**, such as reallocating licenses from blocked to active users.
- **Send tasks** to owners or use automations that let the Syskit Point platform resolve issues such as stopping oversharing.

“We wanted to set up triggers for alerts if some inappropriate or unregulated sharing of resources happens. We needed to know when it happens and get notified about it.”

– **Robert Preskar**, Head of IT projects, Rimac Group

CONTROL MICROSOFT 365 WITH AUTOMATED GOVERNANCE

ENFORCE POLICIES AND EFFORTLESSLY MANAGE WORKSPACE LIFECYCLE

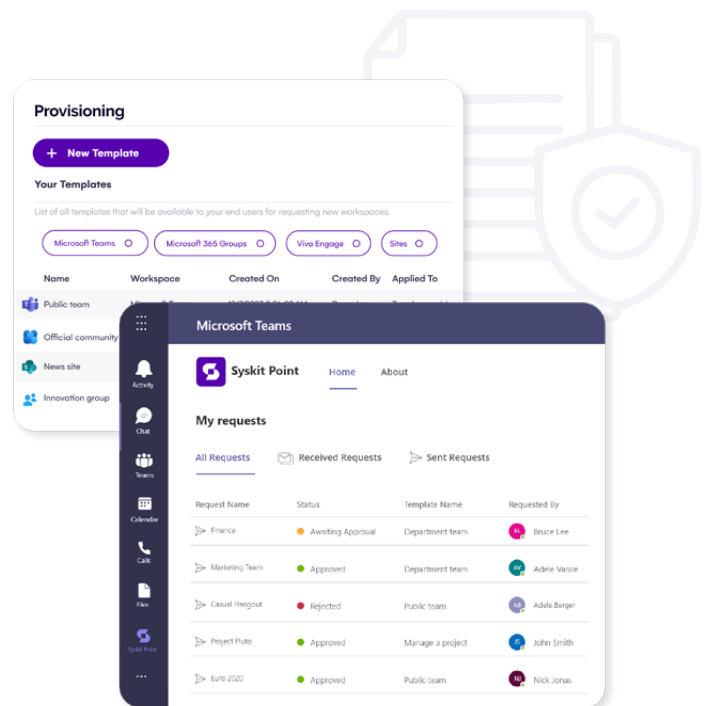

Set policies to control the creation, maintenance, and disposal of your resources. Avoid sprawl and oversharing, reduce IT tickets, protect your data, and get AI-ready.

CONTROL WORKSPACE CREATION – PROVISIONING

Automate workspace creation with **customizable templates** and **intelligent approval workflows**.

Reduce IT tickets and eliminate the chaos of uncontrolled workspace creation while empowering your users with governed self-service capabilities.

- **Always-on governance** — from workspace creation to disposal.
- **Native Teams integration** — easy-to-use app for requests and approvals.
- Extend functionality with **APIs** and webhooks.

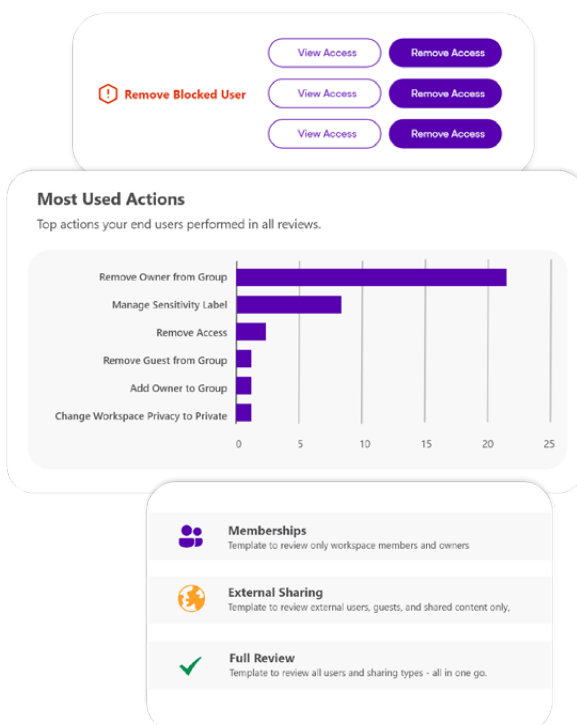

ONGOING MAINTENANCE: EMPOWER BUSINESS USERS WITH SELF-SERVICE WORKSPACE MANAGEMENT

Delegate tasks and request regular workspace reviews from owners.

- Let them manage **access, sharing, and membership** and update **sensitivity, metadata, inactivity, and privacy settings**.
- **Simple interface leads them through the process with tips and guides.**
- **Flexible templates:** You can set up your reviews to include the specific items you want to monitor, such as sharing and membership, or set up a full review.
- **Admin insights and scheduling:** Track actions, measure impact, and communicate value to stakeholders.

Created to reduce risk, control sprawl, avoid oversharing, unburden your IT team, and get AI-ready.

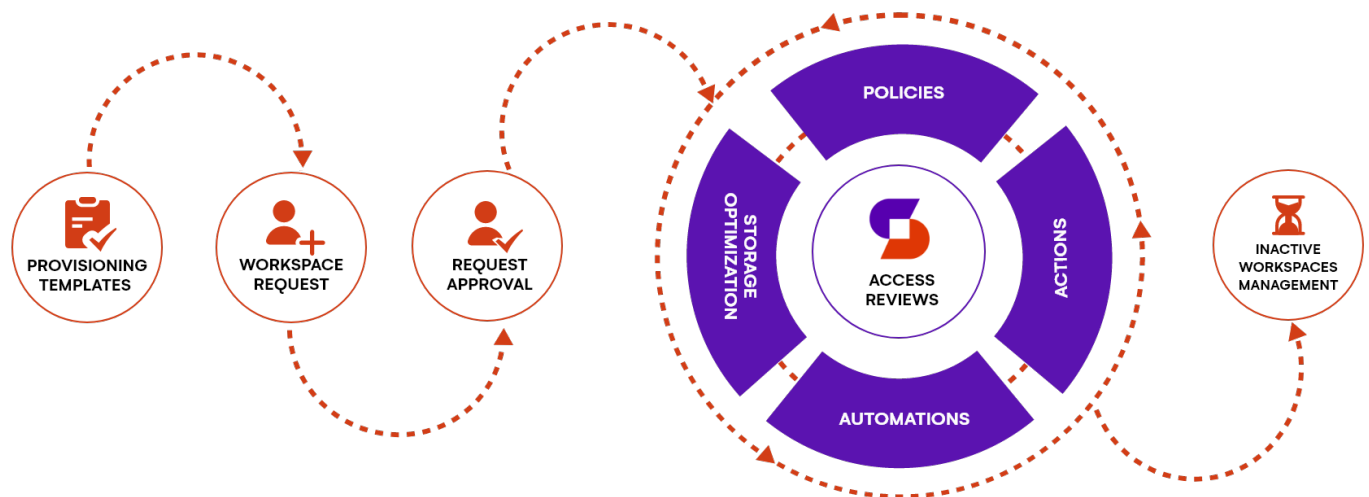

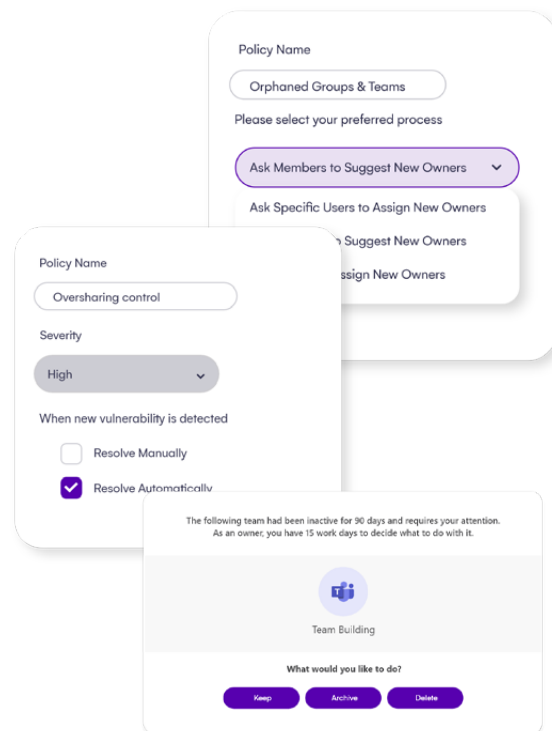

LIFETIME MAINTENANCE – POLICIES AND AUTOMATIONS

Automate security and compliance across all your workspaces with smart rules that enforce policies. You set the conditions, Point will do the rest.

Manage workspaces on your own, or **delegate tasks and schedule workspace reviews** to owners.

- Avoid having orphaned workspaces, or those with too many owners.
- Control and stop oversharing.
- Ensure guest users are reviewed regularly.
- Control how sensitivity labels are applied.

Unclutter your tenant, detect inactive workspaces automatically, and let owners decide whether to keep, delete, or archive them.

Save 26 hours per user with improved experience and governance implementation.*

*Internal research on a company with 10,000 users and an IT team of 10 FTEs.

AI is here, and Copilot is changing how we work. It boosts creativity and productivity, but it can also increase security risks. Every Copilot user can access SharePoint agents, and site owners can even build their own—making it easy for agent sprawl to get out of control.

Oversharing and data leaks

Microsoft Copilot can expose sensitive, overshared files and data – internally and externally – to unauthorized and unintended users.

AI hallucinations, redundant information

Copilot can access old and redundant data and present that information as facts. This leads to AI hallucinations and creates misleading and inaccurate content.

Agent sprawl

As site owners and editors can create their own custom agents, it leads to duplicate solutions, confusion about which agent to use, and complex management.

- Manage permissions and sharing – **ensure that only the right people have access** to sensitive, copyrighted, and important internal information.
- **Detect custom agents**, usage, ownership, and their data sources.
- Delegate proactive care of workspaces to their owners – **reduce the impact of outdated content and control oversharing**.
- Enforce policies and **automatically detect workspaces that might be risky**. Receive alerts, act immediately, or send tasks to owners.

Provide a secure, governed, and compliant environment for AI-driven innovation and productivity with Syskit Point.

SYSKIT POINT – SIMPLE TO DEPLOY AND SCALABLE TO YOUR NEEDS

- ▶ Gain complete visibility
- ▶ Ensure regulatory compliance
- ▶ Establish business continuity
- ▶ Avoid sprawl & oversharing
- ▶ Optimize costs

Ensure AI solutions provide correct, relevant, and safe information. Optimize the process for admins, site owners, and end-users.

LIONSGATE

FLEXIBLE DEPLOYMENT AND SCALABILITY

Choose Cloud-ready or deploy in your own environment. Serving companies of any size – supporting you as you grow.

INNOVATION, SIMPLICITY, SECURITY

Fast onboarding and easy-to-use. Up-to-date with technology trends and the highest standards (SOC2 Type 2, ISO/IEC 27001).

“I'm really impressed with how Syskit Point keeps getting better with new features. It shows they're not just stopping at good enough, but always striving to give you more value.”

– **Scott Dyer**, Senior Director of Information Technology, Ovative
